Biographical Sketch of
Mrs Elizabeth Wharton

Lately, in Durham, Mrs Elizabeth Wharton, fourth daughter of the late Thomas Wharton Esqr of Old Park. She was one of those persons whose excellent qualities are only known in the circle of their private friends — though they may possess talents and virtues of a higher order than many can boast of, who have attracted to themselves the admiration of the public. We have a pleasure in noticing persons of this description, and may safely assert that Mrs E. Wharton held an exalted station in the sphere of society in which she lived. She possessed a masculine understanding and a sound judgement. Whatever she knew, she knew well. Every subject that came under her consideration was weighed in a fair balance, latent merits were ascertained, false pretensions discarded & the standard of truth applied alike to persons and things with promptness & decision. No wonder then that possessed of such acknowledged powers of discrimination, she was frequently consulted by her acquaintances, & that the knowledge she had laid up for herself should have become highly profitable to her friends. The science to which she had devoted the most part of her time & attention was Botany, in which she was a very considerable proficient. Several folio volumes of British plants drawn in water colours with great spirit and fidelity, and with close regard to the individual character of the of the subjects depicted attest her skill & industry — and would prove a valuable acquisition to science if published to the world. Her Religion was unaffected and pure and her conduct throughout

life guided by the most steady & uncompromising principles of moral rectitude. Equally guarded against the misrepresentations of fraud, & the aspersions of malice her heart was ever tenderly alive to the impulses of charity. An injury arising from a severe fall in her youth gradually in its consequences deprived her of many of the resources which might have been the ornament & solace of her maturer age. Her arms became paralized, & her sight impaired. In consequence of long protracted illness she was chiefly confined to her couch & rendered dependent upon others for some years previous to her death. Still however were her spirits unsubdued and her conversation animated, & her example truly edifying — The warm interest which she continued to take in passing events was devoid of that morbid curiosity which seeks for amusement in the detail of news — It was for the most part excited by circumstances which led her to think and compare, & draw conclusions which often escaped the sagacity of less cool reasoners — It was delightful to observe how she sympathized with a sort of youthful ardour in the in the pains or pleasures of her friends! The satisfaction she evinced in their welfare, & the eagerness with which she would caution them against any project which might lead to their prejudice. Her resignation to the will of God was conspicuous, yet her sufferings and her patience under them were topics from which she

herself carefully abstained. but which it becomes therefore more incumbent in us to notice in the above brief sketch of her character, & her virtues.

BRITISH FLOWERS.

E. & M. WHARTON.

Oak Spring Garden Library

Dear Cousin,

Elizabeth has many thanks to send you for the addition you have made to her garden amusement, the Broom was so nicely packed it could not fail to come safe, she has repotted it & it looks quite fresh – The seeds will be sown as you direct – & the large package of Ranunculus roots, which she considers as a great treasure, are much finer than any she has had before: if they do not flower well John will tell you it is because they have manure from the Stable & not the Cow-house, but as we can procure the one & not the other she flatters herself he is unnecessarily nice.

We rejoice that your Gloxinia is springing – Eliz: has one which was also stored which is doing the same, & no doubt but both will do well – it should be kept in a warm part of the Greenhouse till the middle of February, watering it very gently as she told

Dear Cousin,

Elizabeth has many thanks to send you for the addition you have made to her garden amusement, the Broom was so nicely packed it could not fail to come safe, she has repotted it & it looks quite fresh — The seeds will be sown as you direct — & the large package of Ranunculus roots, which she considers as a great treasure, are much finer than any she has had before: if they do not flower well John will tell you it is because they have manure from the Stable & not the Cow-house, but as we can procure the one & not the other she flatters herself he is unnecessarily nice.

We rejoice that your Gloxinia is springing — Eliz: has one which was also stored which is doing the same, & no doubt but both will do well — it should be kept in a warm part of the Greenhouse till the middle of February, watering it very gently as she told

you: after that time it may be put into the stove & water'd more, to encourage its shooting — she is very glad the plants you took from Durham look well, the small leaved Acacia should be always in the most airy part of the Greenhouse & when the other plants are brought in, the Melalenca may be its neighbour — but the broader leaved Acacia Elizabeth thinks you had better put into the Stove immediately, as it springs from a West Indian seed.

The unhappy Linum which was the favorite of the red-spider, is growing & looking healthier as yours does — & of late when search'ed for spiders none have been found but it is still performing quarantine in the yard — when that is over it will be so late, that it cannot flower as early as your Book mentions — but Elizabeth's fear of the red spider is so great that it must submit to this. Do not use any harsh expression with regard to the

Statice-mucronata, for you are to know that it is a great favorite both with her & with me - the flower is still fresh, & the plant is growing at a great rate; the young leaves being a dark red till they are full grown give it a still odder appearance - Your Chironia is also improved in health & when the whole head of flowers were in blow together it was much admired. We were glad to hear from John & Robert that Mr. Wharton's cold was quite well - and we are pleased with their & your report of Catharine - we must believe that none of you will be sorry that they have prolong'd their stay till after Friday, for at Auckland on that day they cannot fail of being amused - Maria Wilkinson has performed her projected Tour, & is now at Kirk Ella with her Brother - she seems to have been much gratified at Scarborough by meeting Mr. Rupal who was always kind to her. I am sorry I have no good news to tell you of Mr. Hutchinson, we are apprehensive of hearing the worst. With our united Best love to you all, I am ever truly Yrs. Marp: Wharton

We were much interested by Denham & Clapperton, especially the latter, who we thought gave the clearer description of what he saw – the Book would have been better had we read Capt. Lyon's acc.t of his Travels before, the want of this made it rather obscure at the beginning.

Mrs. Mary Anne Sherman

Mrs. Norton

Alderford.
